INTRODUCTION

Stop!

Are you looking for an easy way to search for people who are able to work on a problem that you specified? Then definitely don't put this guide down, and don't flip to the next page. It is essential for you to read the introduction.

I will give you a brief description on how SEARCH works. SEARCH application allows you to enter the URLs of faculty members. Once you have a list of URLs, you can then enter in a problem domain – any problem at all! Then voila! With just one click of a button, SEARCH will give you a list of people who specialize and solve with the problem you just entered. It's not just ANY list. It's a list that gives you the URLs in order of relevance – that is, at the top, it will give you the URL of the person that specializes on the problem the most and at the bottom, you will get the URL of the person with the least specialty. Easy?

This is the fifth version of SEARCH application. With our first four versions, we had over 10 MILLION people purchased this. They also gave us plenty of positive feedbacks about the application. Here is our website: <http://www.searchapps.com>. With this new version, we hope that it will do more than you expect and give you the most satisfaction.

Enjoy!

URLs

- Click on the Enter URLs tab

Entering URLs

There are two ways to give the application a list of URLs:

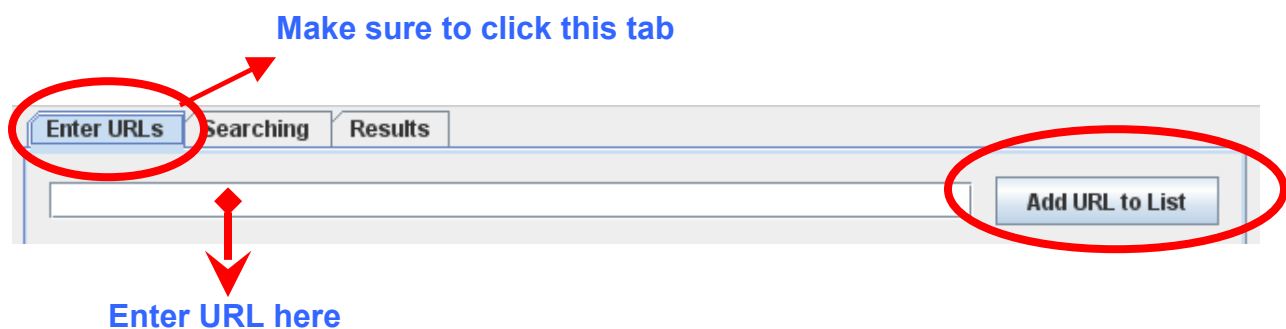

1. Type a URL. The URL must end with a forward slash (/)
2. Import a .txt file that has a list of URLs

TYPING URLs

STEP 1: Type in a URL in the box

STEP 2: Click Add URL to List

The URL that you entered will be added to the list of URLs

IF URL IS NOT VALID, YOU WILL SEE THE FOLLOWING:

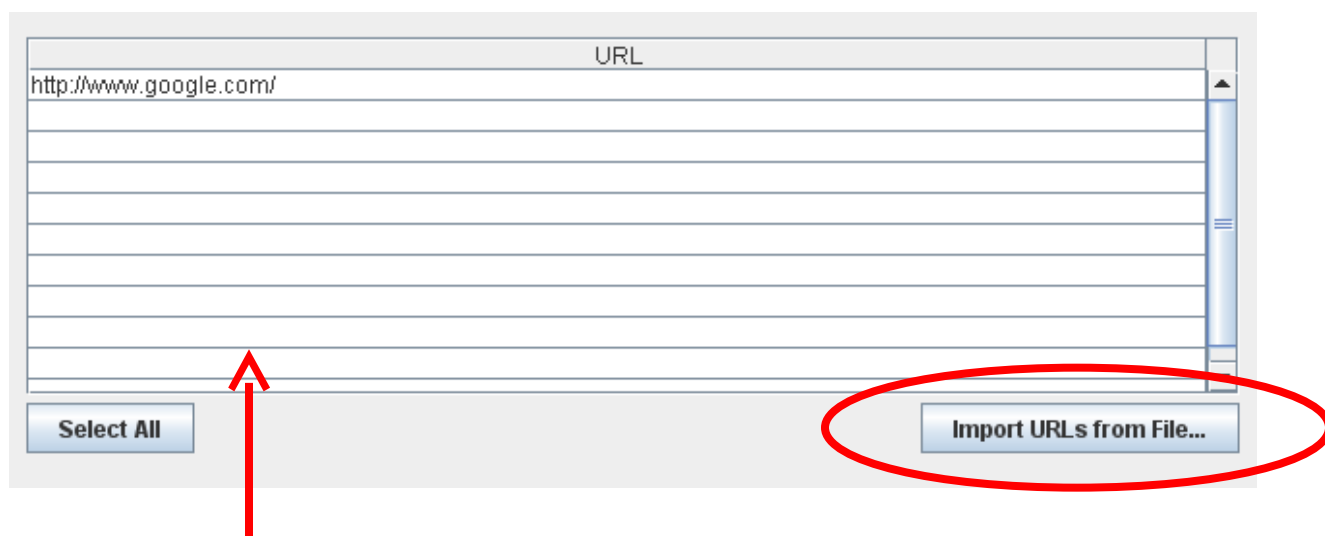

IMPORTING A FILE

- STEP 1: Click Import URLs from File...
- STEP 2: Select the file that has the list of URLs
- STEP 3: Click Ok

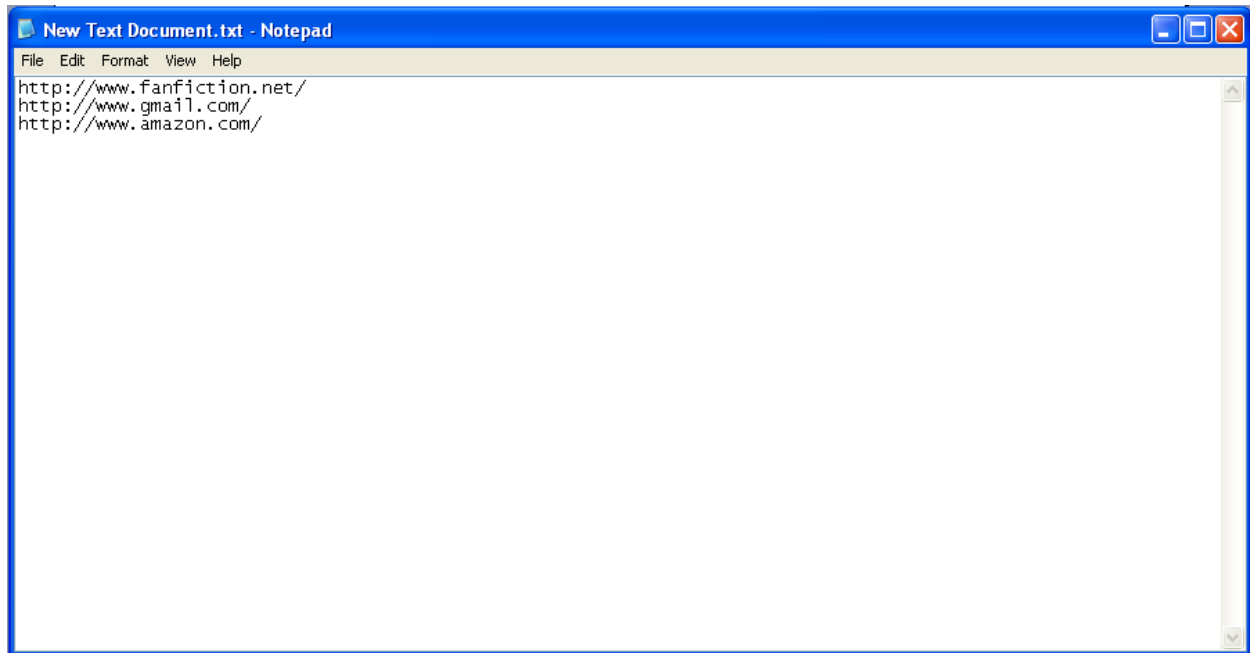

The list of URLs that you just imported will be added to the list of URLs

The URLs entered or imported will be added here

IMPORTANT NOTE: file must have a .txt extension
: file must have one URL per line
: all URLs must end with a forward slash (/)

The image below is just an example:

Deleting URLs

STEP 1: Choose the URLs from the list of URLs that you want to delete

OR Select All if you want all the URLs

STEP 2: Click Delete from List

If you want to delete all URLs

NOTE: The **Select All** button will change into **Deselect All** if you want to deselect all the URLs.

PARAGRAPH

- Click on the Searching tab

ENTER A PARAGRAPH

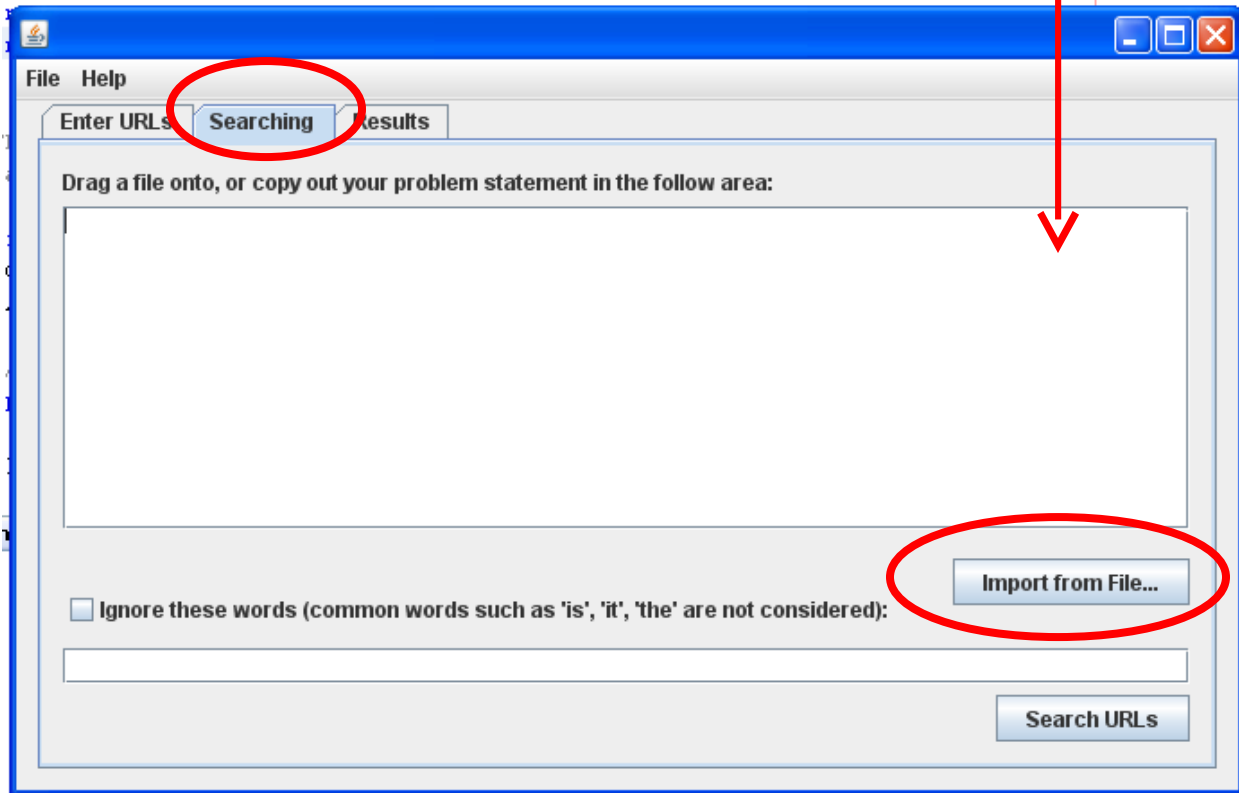

There are two ways to enter a paragraph

1. Type the paragraph
2. Import a .txt file that contains the paragraph

TYPING PARAGRAPH

STEP 1: Type in a paragraph in the box

TYPE HERE OR
The paragraph from
the imported file will
show here

IMPORTING A FILE

- STEP 1: click Import from File...
- STEP 2: Select the file that has the paragraph
- STEP 3: Click Ok

NOTE: File must have a .txt extension

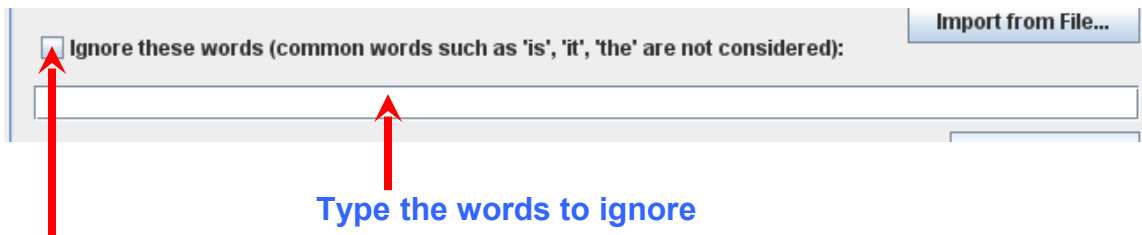

The paragraph from the file you just imported will be shown in the box.

SEARCHING

REFINING SEARCH

- STEP 1: Click on the **Searching** tab
- STEP 2: Type the words you want ignored
- STEP 3: Click on the checkbox **Ignore these words**

* You can also delete the words that you don't want ignored from the text box. There are default words such as "am", "is", "she" that you can also delete.

☐ Ignore these words (common words such as 'is', 'it', 'the' are not considered): [Import from File...](#)

Type the words to ignore

Check to ignore

SEARCH

- STEP 1: Click on the **Searching** tab
- STEP 2: Add URLs
You must have at least one URL in your URL list (see page)
- STEP 3: Enter paragraph
Like the URL list, you must also have a paragraph in the paragraph box (see page)

STEP 4: Add words you want ignored (see page)

STEP 5: Click Search URLs
